Airspace Asia Pacific event held in Hong Kong. As a premier gathering for the region's air navigation service providers and aviation technology leaders, the event served as a vital forum for exploring the next generation of airspace management and global collaboration.

During the summit, ZDH demonstrated its established expertise in advanced navigation technologies and high-precision data services. Our delegation showcased a suite of intelligent air traffic management (ATM) solutions designed to enhance operational safety and airspace throughput.

A core highlight of the event was the deep technical exchange with civil aviation authorities and industry representatives from key regions, including Singapore, Thailand, and the UAE. These dialogues focused on critical industry pivots:

Airspace Optimization

Strategies for maximizing efficiency in increasingly congested corridors.

Intelligent ATM Systems

Leveraging automation to reduce controller workload and increase safety margins.

Technological Upgrading

Transitioning to next-generation navigation frameworks to support regional growth.

Looking Ahead

ZDH remains committed to advancing core R&D and fostering international partnerships. By aligning our technological roadmap with global standards, we aim to contribute to a safe, efficient, and sustainable blueprint for the future of civil aviation.
