WORLD SAFETY & OPERATIONS CONFERENCE

Xiamen, China
14-16 October 2025

ZDH at the Forefront of Global Aviation Excellence

The 2025 IATA World Safety and Operations Conference (WSOC) recently concluded in Xiamen, bringing together over 800 professionals from 70 countries. Under the theme "Aviation for the Future: Strategies for Success," this flagship event provided a premier platform for industry leaders to address the most pressing challenges in global flight operations.

For ZDH, the conference offered a significant opportunity to engage with international peers and demonstrate how our integrated solution suite drives operational excellence. During the event, our team highlighted several key technologies designed to meet the evolving demands of modern airlines:

Skyhub Flight Planning System

Advanced route optimization engines aimed at reducing fuel consumption and supporting the industry's net-zero sustainability goals.

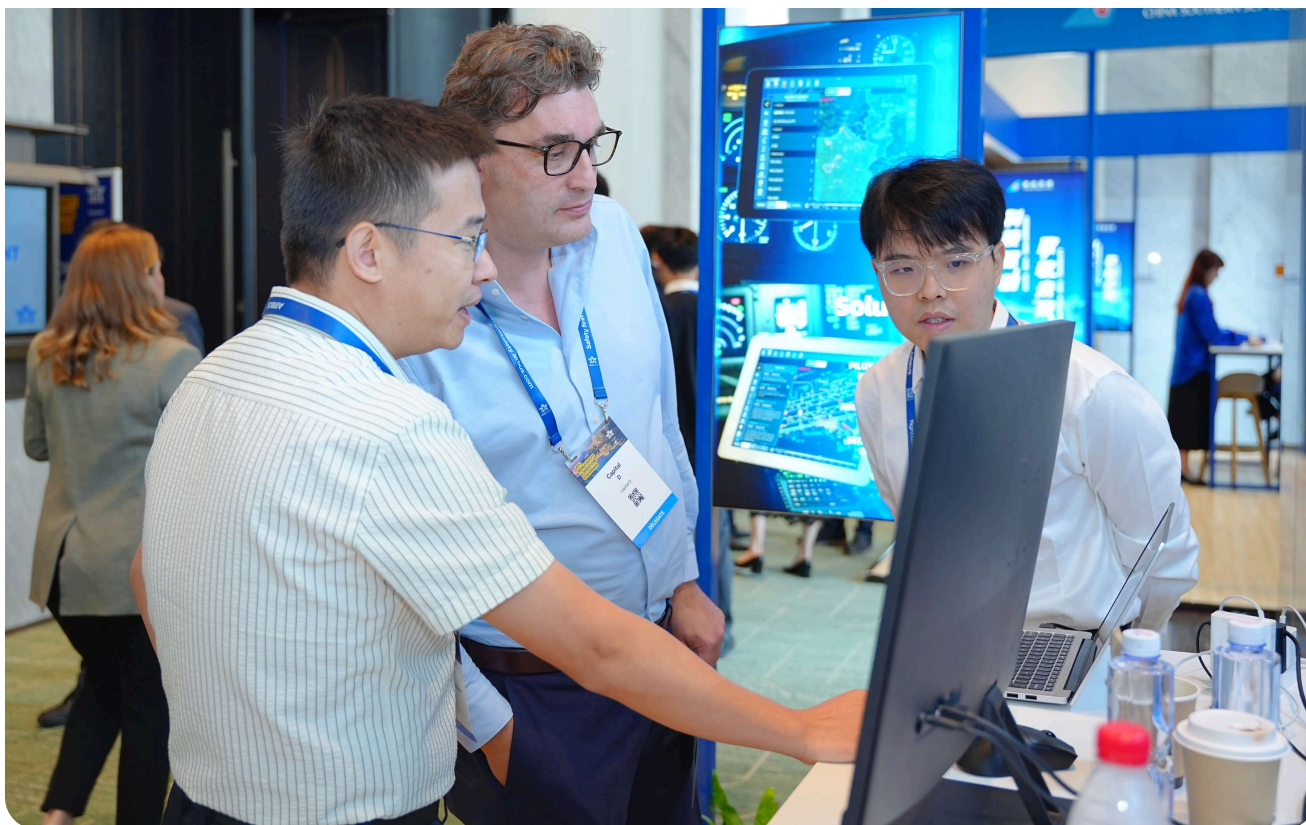

Standardized Aeronautical Data

High-fidelity data solutions compliant with global standards, providing a comprehensive operational overview for complex airspace environments.

Integrated Cockpit & Apron Intelligence

A unified ecosystem featuring EFB, AMM, and Digital NOTAMs, delivering an end-to-end paperless environment and enhanced situational awareness for flight crews and ground operations.

The insights gained from this year's WSOC further reinforce our commitment to delivering tangible value to the global aviation community. We remain dedicated to fostering safer, more efficient, and sustainable skies through continuous technological innovation.
